

Version 1.0 :

The theme of this first version is all about the ambience around storms and thunderstorms. Thunderstorms can now be heard more realistically in all cabs. For the wind, all exterior and interior sounds have been replaced by new realistic sounds.

Version 1.1 :

- The thunder sound was played too loudly at some early stands. I have therefore now set the thunder sound a little quieter. The sound may now be a little too quiet for some of the driving positions, but it can be heard crystal clear again when the window is open.
- I then also adjusted the wind sound.
- I also created a new sound curve for the new wind sound. This curve now uses the entire sound file and not just a fraction of it. This creates more variety in the wind.
